SURFACE COATING OPERATIONS: AUTO REFINISHING

Course No. 230.2

This one day course addresses the problems inherent in enforcing a VOC rule at a large number of small sources while focusing on the Automobile Refinishing industry. It begins with the materials and procedures of collision repair and the ramifications of color matching versus color changing. The evolution of coating technologies, product compatibilities and use reduction versus retrofit control strategies will also be discussed. Finally, this class will walk the inspector through the documentation needed to confirm compliance, recognizing higher transfer efficiency equipment and what complying coatings are available off the shelf.

**Mar 16, 2005
8:30 AM - 5:00 PM
Training Room 5, 5th Floor
Cal/EPA Building
Sacramento, CA**

Class includes an afternoon field visit. Field visit and exam are mandatory to obtain a certificate of completion. **Appropriate safety gear including steel toed shoes, ear & eye protection may be required.** Enrollment fee may apply.
